

## THE GUIDE TO

# Growing Marijuana & Making Marijuana Products in Massachusetts

The marijuana law in Massachusetts allows adults 21-years and older to grow cannabis and make cannabis products at home.

*However, if not done correctly, it can be dangerous to you, your family, and your neighbors.*

## Growing at Home

The law allows adults 21+ to grow up to six cannabis plants in their home, or 12 plants for two or more adults.

Growing cannabis plants indoors often requires high-powered lamps, temperature controls, and expanded levels of ventilation which can overload electrical circuits and cause fires.

### BE SAFE

To lower your risk of electrical fires, consult a **licensed electrician** to ensure you are following all relevant fire codes.

# Manufacturing & Storing Cannabis Products

## Cannabis Oil Extraction

When making concentrates, extracting cannabis oil with flammable materials such as propane and butane is *illegal*. These materials release vapors that can easily trigger explosions. Consider alternative extraction methods.

## Cannabis-Infused Edibles

When making edibles at home, like cannabis-infused beverages or baked goods, it can be challenging to distribute cannabis *evenly* throughout a product. This can make it hard to control the potency and dosage of the edible and difficult to predict how someone will be impacted by it.

## Keep Kids and Pets Safe

If you have any marijuana products in your home, be sure to store them away in a locked storage container and *out of reach of children and pets*.
